

ABSTRACT

Topic: Car Showroom Management

Project Nature: Mini Project Extension

Completion Level: 20%

Car Showroom Management is an online system which keeps a track of all cars along with their each and every details including the price, features etc. And also it keeps a record of their employees. Through this website user can book their service, book vehicles and book test drive. In this system the user can compare cars and their models. The primary objective of this web site is to give awareness about the vehicles, available offers in particular periods and new launches.

This system will help the user to know about the offers, availability and price of the vehicle easily. Can compare the models, compare features etc. In this system employee attendance done through biometric scan is available. In this system a loan assist is available that will give the details about the EMI options available for a particular car. In this system there is also a feature which helps employee to add the mechanic works and the user to choose which all works should be done. The aim of proposed system is to develop a system of improved facilities. This system includes three modules User, employee and Admin.

Admin :- The main responsibilities of admin are to add car, add employee and add new launches. Admin has also the ability to edit the details of car. Admin can also remove car which have been added. Also he can remove employee. Admin can also manage test drive.

Employee :- Employee can view their attendance, can manage test drive. Also employee can manage the service that is, can schedule service and update works that should be done at the time of service.

User :- User can view the website and checkout the information about cars and they can also enquiry about the car, compare cars and their models, book for test drive and can purchase car. User can also choose which all mechanic works should be done at the time of service. And also the user can give ratings and reviews to the cars according to his experience.
